Professional Summary

Senior DevOps & Site Reliability Engineer with 6+ years of experience building and operating high-availability, cloud-native platforms for **global-scale systems**. **Certified Kubernetes Administrator (CKA)** with a proven track record of **maintaining 99.9% SLA** across 100+ environments supporting millions of global users. Successfully **reduced platform operational costs by 58%** and **accelerated release cycles by 40%** by engineering robust CI/CD pipelines and modular IaC across **GCP, AWS, and Azure**. Experienced in collaborating within **fully remote, cross-border teams** to deliver enterprise digital services for global brands.

Work Experience

Nusa Crew – DevOps Engineer (part-time)

Client: creator subscription platform (confidential)
Remote | Nov 2025 – Present

- Built a self-hosted PaaS on Hetzner Cloud using Dokploy and Docker Swarm with a GHCR private registry, resolving multi-node image distribution, config persistence, and cross-service DNS issues to enable git-push deployments.
- Deployed a full observability stack (OpenTelemetry Collector, Prometheus, Loki, Tempo, Grafana) giving metrics, logs, and traces in a single pane of glass.
- Deployed a self-hosted open-source LLM with Ollama on a Hetzner Cloud VM provisioned via Terraform, powering AI chat features between creators and their subscribers.

Merkle Indonesia (Dentsu Group) – Senior DevOps Engineer

Enterprise digital services for global brands
Remote (Jakarta, Indonesia) | May 2025 – Present

- Designed, built, and operated secure cloud infrastructure on GCP and Azure supporting multiple enterprise-scale applications, implementing IAM, network security, and workload identity to meet security and compliance requirements.
- Provisioned and managed core cloud resources (VPC, GKE, GCE, Cloud SQL, Artifact Registry, BigQuery, Dataform, Vertex AI, API Gateway, Cloud Storage, Cloud CDN, Cloud Armor) using Terraform and Terragrunt to ensure scalable and reliable environments.
- **Increased deployment frequency by 65%** for Golang microservices by designing automated GitLab CI/CD pipelines on GKE and Cloud Run, resulting in a 20% reduction in lead time to change.
- Designed and deployed event-driven autoscaling on GKE using KEDA with GCP Pub/Sub triggers, implementing ScaledObjects for 3 production workloads and tuning pre-warming strategies to eliminate cold-start latency under sudden traffic surges.

- Executed a full GKE security audit across 6 controls, implementing Cloud Armor WAF with OWASP rules and geo-blocking, migrating nodes to a least-privilege service account, enforcing private Cloud SQL connectivity via VPC peering, and migrating CI/CD to GitLab CI with self-hosted runners to enable GKE master authorized networks restriction.
- Reduced platform operational costs by **58%** by migrating data orchestration from **Cloud Composer to Apache Airflow on GKE**, improving scalability, observability, and long-term maintainability.
- Validated production readiness via k6 load testing at 700 VUs sustained with 0% error rate and 34ms avg response time, resolving bottlenecks including Cloud Armor rate-limit false positives, NAT port exhaustion, and LB backend timeouts.

AccelByte Inc – Site Reliability Engineer II
Global game backend platform supporting live-service games with millions of players
Remote (Yogyakarta, Indonesia) | May 2022 – Apr 2025

- Maintained **99.9% SLA** across **100+ client environments and millions of active players** supporting global-scale game backend services.
- Designed and operated multi-cloud infrastructure on AWS (EKS, EC2, RDS, DocumentDB, Elasticache, MSK) using Terraform, ensuring high availability and reliability.
- Built automated reporting and monitoring workflows for **OKRs, alerting, and launch readiness**, improving operational visibility and incident response speed.
- Optimized CI/CD pipelines with Jenkins, GitLab CI, and FluxCD (GitOps), reducing release cycles by 40% and improving deployment reliability.
- **Reduced Mean Time to Recovery (MTTR) by 35%** across 100+ global environments by implementing advanced observability patterns in Prometheus and Grafana.

Kompas Daily – Site Reliability Engineer
Leading national media company operating large-scale digital news platforms with millions of daily readers.
Hybrid (Jakarta, Indonesia) | Jun 2021 – May 2022

- Migrated manual deployment processes to Jenkins-based CI/CD pipelines, improving release consistency and reducing human error.
- **Reduced environment setup time by 30%** by refactoring modular Terraform workflows for Azure and GCP, which eliminated manual configuration drift and reduced setup effort by 40+ engineering hours per month.
- Managed highly available production infrastructure across Azure and GCP, partnering with development teams to support business-critical media platforms.

Omni Communication Assistant by Telkom Indonesia – DevOps Engineer
Early-stage enterprise communication platform developed under Telkom Indonesia, the country's largest telecommunications company.
Hybrid (Jakarta, Indonesia) | Jun 2020 – May 2021

- Built and operated cloud infrastructure from scratch on DigitalOcean and GCP for early-stage production systems.
- Designed and implemented CI/CD pipelines using Jenkins and GitLab CI, significantly improving build and deployment workflows.

Education

Bachelor of Information Systems (Cum Laude, GPA 3.51/4.00)
Telkom University (Bandung, Indonesia) | 2015 – 2019

Certifications

- **Certified Kubernetes Administrator (CKA)** – Linux Foundation (obtained 2023), **Terraform Associate** – HashiCorp (obtained 2023)
- **IELTS Academic 6.0** – IDP (obtained 2024)

Technical Skills

Cloud Platforms

- **GCP (GKE, Cloud Run, Cloud SQL, Pub/Sub, Vertex AI, BigQuery), AWS (EKS, RDS, MSK, DocumentDB, ElastiCache), Azure, Alibaba Cloud**

Container & Orchestration

- **Kubernetes (GKE, EKS), KEDA, Docker, Helm**

Infrastructure as Code

- **Terraform, Terragrunt, Atlantis, Ansible**

CI/CD & GitOps

- **GitHub Actions, GitLab CI, Jenkins, FluxCD, ArgoCD**

Automation & Scripting

- **Bash, Python**

Observability & Monitoring

- **Prometheus, Grafana, ELK/EFK Stack, OpenSearch, OpenTelemetry**

Cloud & Platform Security

- **Cloud Armor (WAF), IAM, Workload Identity, Network Policies, Trivy, SonarQube**

Service Mesh & Distributed Systems

- **Istio, Envoy**

Data Infrastructure

- **PostgreSQL, MongoDB, Redis, Apache Kafka**

API & Performance Testing

- **Postman, k6**
